Work environment and electrical safety policy

Everyone who works for, with or delivers to Craftor should do so in a work environment, electrical safety- wise, risk-conscious and responsible manner.

1. All employees have a personal responsibility to be engaged and involved in creating safe workplaces, working safely and acting on deficiencies and incorrect behaviors in the environment. We all take care of each other and make sure everyone gets home safely.
2. Craftor uses materials and methods to work safely. We meet the requirements of our customers and society. At Craftor's workplaces, it is obvious to follow laws, regulations and regulations as well as the company's work environment rules. For our electrical safety work, we follow the instructions established in the electrical safety instructions, ESA, issued by Svensk Energi.
3. Craftor's work environment and electrical safety work are controlled in our management system and we work to continuously improve the system. In the management system, we also control our subcontractors as well as hired staff.
4. All installation work, including checks and tests, shall be carried out within the framework of craftor's self-monitoring programme.
5. Our employees are trained and motivated to create a healthier and safer working environment. Each employee should be given the prerequisite to understand their role and the importance of their own work, be able to influence their work situation, feel responsible for their task and have the necessary powers.
6. Management and employees shall cooperate in the work environment management and in the annual follow-up there it. To the extent that the activities require, the work environment and the work on it must be documented.
